

EZ Faucet Adapter Installation Guide:

1. Unscrew the supply line from the faucet stub.
2. Screw the EZ adapter onto the faucet stub, making sure the gasket is in place.
3. Screw the supply line onto the male end of the EZ adapter.
4. Insert tubing into the Push-In fitting.

Note: We recommend inserting an in-line Ball Valve within 6 inches of the inlet to the filter device, thereby controlling the flow of water and allowing easy on-off functionality.
