

SEE WATER IN A WHOLE NEW LIGHT

SteriPEN® Sidewinder—EASY as 1 – 2 – 3

The SteriPEN Sidewinder, a hand-powered portable UV water purifier, is easy to use. No batteries required. After filling the one-liter BPA-free bottle, follow these three steps*:

Step 1

Attach the Sidewinder to the BPA-free 1 Liter bottle.

Step 2

Flip Assembly & Unfold Handle. Give the water a couple of swirls to create a “vortex.”

Flipping the unit submerges the water sensors and swirling the water or agitating ensures that the entire volume is zapped by the germicidal UV light.

Step 3

Crank Handle—see red flashing LED until cranking reaches optimum speed range. Continue to crank until LED flashes **green** to indicate water purification is complete.

90 seconds to purify 1 L (32 oz.) when cranking at optimum speed (> 2 revolutions/second). User may pause for 6-8 seconds without losing built up purification time.

Red flashing LED indicates that user should crank faster.

When water sensors (silver prongs) are immersed in water, a visible blue light as well as the ultraviolet light are activated.

- SteriPEN® Sidewinder will purify up to 8,000 liters (2000 gallons) of water.
- SteriPEN® UV light destroys bacteria, viruses and protozoa such as giardia—in seconds!
- SteriPEN® Sidewinder is a product of Hydro-Photon, Inc., Blue Hill, Maine, U.S.A.
