

# Bio-Clean® for Septic Systems

## What is Bio-Clean?

Bio-Clean is a special combination of natural bacteria and enzymes that digest dead organic waste found in plumbing systems, including grease, hair, soap scum, food particles, paper, and cotton. However, Bio-Clean will not have any effect on inorganic materials such as metal or plastic pipes, leaving the plumbing system clean and safe. It does not produce heat, fumes, or burns the way harsh chemicals can, making Bio-Clean safe for people, plumbing, and the environment. Within an hour after pouring the Bio-Clean solution into the drain, the bacteria will break down the clogging material and turn it into carbon dioxide and mineral ash. This runs harmlessly out of the waste system, leaving it completely clean of obstructions.

## How Does Bio-Clean Work?

In nature, all animal and vegetable matter is broken down and recycled into plant food by enzymes and bacteria. Bio-Clean® uses this same principle to degrade organic waste that accumulates in plumbing systems. The grease, hair, soap film, and organic waste that clog pipes are food for Bio-Clean. When mixed with water, Bio-Clean starts to go to work immediately. The enzymes in the Bio-Clean mixture prepare the organic waste by breaking down the large molecules for the bacteria. Then, the bacteria will break these particles down into even smaller pieces that can be washed away, out of the plumbing system. Cables and plumbing snakes will only poke holes through the clogs, but Bio-Clean will completely eliminate the problem.

## Can Bio-Clean Save Me Money?

Chemicals, bleaches, detergents, food preservatives, and bowl cleaners inhibit or kill the bacterial action in septic systems. This will then allow solids to accumulate in the tank, then clogging the drain field. This can be an inconvenience, but even worse, it can cost hundreds of dollars to repair the damage! Monthly treatments of Bio-Clean will restore the necessary bacterial action and make your system work its best!

## Compare Bio-Clean to Mechanical Equipment

Cables and snakes just poke holes in the clogs. Bio-Clean solves the problem by eliminating the clog altogether!

## Compare Bio-Clean to Chemicals

Dangerous chemicals can burn or damage fixtures and pipes. They also get diluted and weaker as they go down the pipe. Bio-Clean eats it way up, down, and all the way through the pipe system, eliminating the clogging materials.
