PuroSmart™ Faucet Mount Reverse Osmosis System

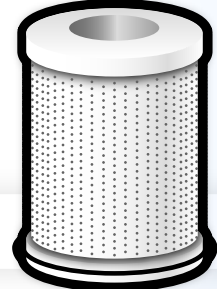

The portable PuroSmart™ Reverse Osmosis system attaches to your faucet and includes carbon block pre-filtration. The carbon block pre-filter removes chlorine, bad taste and foul odors. The reverse osmosis membrane in the PuroSmart™ removes nearly all other common contaminants found in tap water. The portable PuroSmart™ is the most compact RO system on the market. Unlike other small filter systems that require frequent cartridge changes and only remove taste and odor, the PuroSmart™ truly purifies water at the molecular level.

This compact and portable RO system is ideal for **offices**, **RV's** and **college dorms!**
