

# Phosphate

A quick, easy, and reliable method for testing phosphates in pools utilizing a test strip has been developed. Because phosphates are the primary food source for algae, the more phosphate, the more algae. High phosphate levels can produce resistant algae and interfere with the sanitizing property of chlorine. Regularly testing for phosphates can help to ensure a properly maintained pool. Reliable results are available in 30 seconds.

---

## Test Procedure:

### Step 1:

Dip strip into vial for **30 seconds** with up and down motion, making sure both test pads are in contact with sample.

### Step 2:

Remove strip from vial, place sample vial on white spaces between the colors on the chart. Viewing vial from top, match to closest color. Complete matching within **30 seconds**.

---

## Detection Range:

**Phosphate** - 0, 200, 400, 600, 1000, 2500 ppb

---

## Packaging:

Bottle of 50 test strips
