PREFILTER

E-10 and E-20 Prefilters can be used for post mix applications. Everpure prefilters are designed to increase the life of Everpure pre-coat water filters in areas with an unusual amount of dirt in the water. With a 10 micron (nominal) rating, the economical Everpure prefilter traps much of the dirt which contributes to scale buildup in ice makers, and clogs the delicate orifices of other water-using equipment.

When you install an Everpure prefilter, the pre-coat filters can concentrate on what they do best: remove particles 1/2 micron and larger in size.

The HC and HF Filters and their respective cartridges have been tested and listed by NSF only for the functions listed above. Check for compliance with state and local laws and regulations. Do not use where the water is microbiologically unsafe, or with waters of unknown quality without adequate disinfection before or after the unit. The HF filter can be used with water that may contain filterable cysts.
