

Watts Half Turn Mount Potential “Gurgle” Issues

The faucet has an air diffuser which quiets water to drain. This diffuser fits into a small hole on the faucet. Sometimes during installation, the diffuser can get lodged in this hole. See the difference below.

This is the diffuser

✓ Properly
Installed:

✗ Improperly
Installed:

If the diffuser is not properly installed, the air disperser will allow a loud “gurgle” noise to be created when the RO is making water. Customer needs to check and verify white diffuser is present and is installed correctly.
