

Sediment Trapper Spin-Down Filters

RUSCO's Sediment Trapper Spin-Down Filters make solid particle removal simple and economical. They are easy to clean and re-use. Available for ALL size systems!

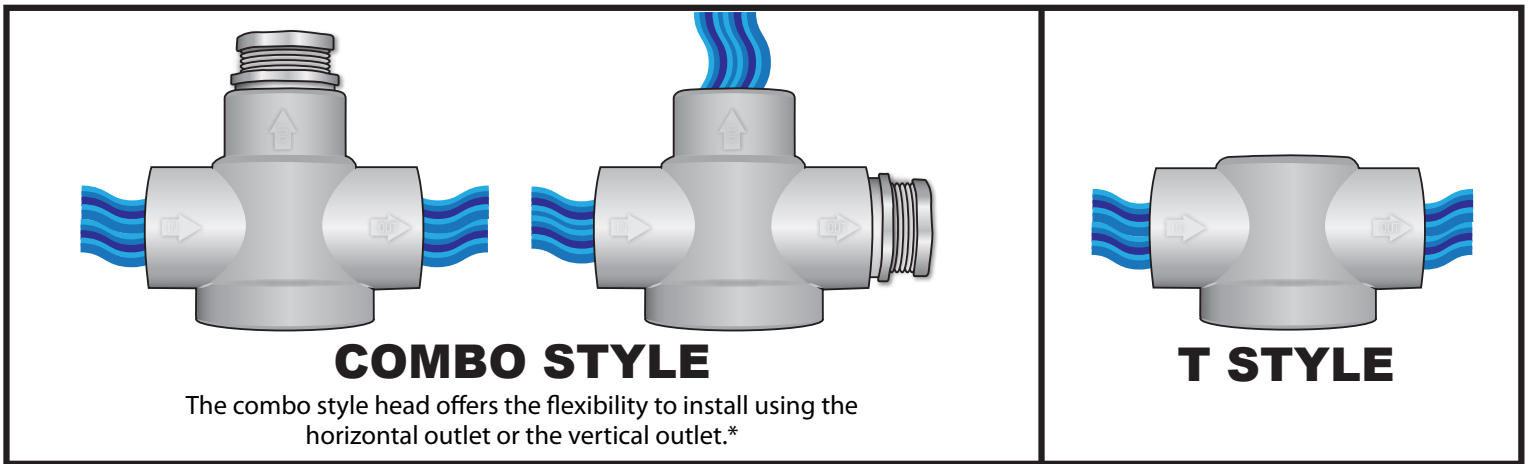

HOW IT WORKS:

The RUSCO Sediment Trapper Spin-Down Filter utilizes centrifugal force to separate the sediment from the water. The sediment trapper element is a specialized version of the spin-down sediment filter designed to allow debris to settle in the bottom of the clear cover, thereby "trapping" sediment away from the screen. The valve at the bottom allows for the easy manual discharge of the sediment. During the operation of the filter, the sediment accumulation can easily be seen through the clear housing. The sediment trapper differs from the standard spin-down filter in that it offers additional sediment reservoir capacity.

Available with Combo-Style or T-Style Head

COMBO STYLE

The combo style head offers the flexibility to install using the horizontal outlet or the vertical outlet.*

T STYLE

*Both outlets cannot be used simultaneously.

Spin-Down Sediment Filters

	Mesh Size:	Micron Rating:	Protection For:	Contaminant:
Larger Openings	24	711	General Use	Shale, Sand, Shell or Debris
	30	533	General Use	
	40	381	General Use	
Smaller Openings	60	254	Sprinkler Systems, Faucet Aerators and Sand-Sensitive Valves	Pipe Scale and Coarse Sand
	100	152	Poultry Growers and Watering Devices	
	140	104	Drip Irrigation Systems, Faucet Aerators and Sand Sensitive Valves	Fine Sand
	250	61	Fogger Spray Nozzles	
	500	30	Pre-treatment	
	1000	15	Pre-treatment for Ultra Filtration and Reverse Osmosis	Grit
				Ultra-Fine, Fine-Grained, Powder or Dustlike Sediment
