## M-100 Membrane Preservative

**AXEON M-100 Membrane Preservative** safely prevents microbiological growth within membrane elements and in membrane systems during long and short-term storage.

| AXEON M-100 Membrane Preservative  |  |  |              |
|--|--|--|--------------|

| Microbiological growth within<br>membrane elements and<br>systems during storage | Thin film composite,<br>cellulose acetate, ultrafiltration | 1 pound <b>AXEON M-100</b><br>to 6 gallons water | Medium / Low |

#### **Product Benefits**

**AXEON M-100** safely and effectively prevents microbiological growth within membrane elements and systems during long- and short-term storage. It replaces the use of sodium metabisulphite and other chemicals that are typically used. While sodium bisulfite can be hazardous or unstable, **M-100** is effective long-term and does not create environmental or health risks. **AXEON M-100** is compatible with all membrane types and rinses easily from membranes. **AXEON M-100** is packaged as a dry, stable, nonreactive powder for ease of transportation and storage.

### Procedures

#### In Storage

- Clean the membranes with AXEON C10 or C20 Cleaners prior to storage. Using good quality water (RO product water), mix at a ratio of one pound M-100 to 6 gallons of water.
- Recirculate storage solution at low pressure (less than 60 psig) through membranes for minimum of 15 minutes.
- **3.** After recirculation, shut system down making sure storage solution does not drain out of membranes.
- **4.** After storage, rinse membranes with good quality water for 30 minutes before system start up.

#### **Container Storage**

- 1. Clean membranes with AXEON C10 or C20 Cleaners.
- Using good quality water (RO product water), mix a ratio of one pound M-100 to 6 gallons of water. Place membranes in storage container containing M-100 solution.
- **3.** After storage, place membranes in system and rinse with good quality water for 30 minutes prior to system start-up.
